Angular Material is always using the [Roboto](#) font for its components.

The [Roboto](#) font will be **not** automatically loaded by Angular Material itself. The developer is responsible for loading all fonts used in their application. Shown below is a sample *link* markup used to load the [Roboto](#) font from a CDN.

## Icons

- |                                   |                          |
|-----------------------------------|--------------------------|
